## Internal Communications

### Background

The communications between managers, members of the board and members of working groups, etc., becomes more and more important. The use of new technologies can improve our internal communication.

### Current situation

The IARU is now making use of mail communication, mainly with mailman. This is problematic; some members can't communicate when email addresses changes. The system we are using now is not flexible and outdated.

### Proposal

The IARU should update its internal communication by using cloud services instead of the use of mail services. This should be implemented in June 2015.
