The number of beacons per slot in the 50 MHz (future) Synchronized Beacon Project

For the planned synchronized beacon segment in IARU Region 1, 50 000 to 50 010 MHz, we propose each slot (channel) to have five (5) beacons.

For memo technical reasons it is easier (for the users) to remember:

- A repeating 5-minute sequence: (01, 06, 11, 16, 21, 26, 31, etc.)
- Than for example a 4-minute sequence (01, 05, 09, 13, 17, 21, 25, etc.)
- Or a 6-minute sequence (01, 07, 13, 19, 25, 31, 37, etc.).
